

Forskrivningsmodulen (e-resept) Updater 1.0.15 (#17536)

Release Notes

22.8.2019

Customer Defect

Fixed a problem where the FMU could not unzip a valid zip package

[RENO-12164, Resolved, FMU unable to unzip 3.7.1 update file]

Defect

The prerequisite checker for the updater now only warns if there are unrecognized sub-folders in the FM client folder being updated. The update process also empties and then removes empty sub folders before update (after backup), to allow validity checkers to compare incoming update with the actual updated client.

This also involved fixing a problem that prevented the FMU to update itself.

[RENO-15338, Resolved, FM Updater cannot update from FM 4.4 or later]
